

ABC Diagnostic Centre
123 Health Avenue, Kitchener, ON
Phone: (555) 123-4567

Patient Name: John Doe
Patient ID: 987654

Age: 46 years

Gender: Male

Report Date: 2025-02-10

Referring Physician: Dr. Smith

----- Blood Test Report -----

1. Glucose Profile

- Fasting Glucose: 160 mg/dL (Reference: 70–99 mg/dL)
- Postprandial Glucose (PP): 195 mg/dL (Reference: <140 mg/dL)
- HbA1c: 7.4 % (Reference: 4.0–5.6 %)

Interpretation: Elevated fasting glucose and HbA1c suggest poor glycemic control and increased diabetes risk.

2. Lipid Profile

- Total Cholesterol: 230 mg/dL (Reference: <200 mg/dL)
- LDL Cholesterol: 145 mg/dL (Reference: <100 mg/dL)
- HDL Cholesterol: 38 mg/dL (Reference: >40 mg/dL)
- Triglycerides: 210 mg/dL (Reference: <150 mg/dL)

Interpretation: Borderline-high total cholesterol with raised LDL and triglycerides. Indicates increased cardiovascular risk.

3. Blood Pressure (Clinic Reading)

- Systolic BP: 145 mmHg (Reference: <120 mmHg)
- Diastolic BP: 92 mmHg (Reference: <80 mmHg)

Interpretation: Blood pressure indicates hypertension (Stage 1–2). Lifestyle and dietary modification recommended.

4. Liver Function (Summary)

- ALT: 32 U/L (Reference: 7–55)

- AST: 28 U/L (Reference: 8–48)
- Alkaline Phosphatase: 90 U/L (Reference: 44–147)

Interpretation: Liver enzymes within normal limits.

5. Kidney Function (Summary)

- Serum Creatinine: 0.9 mg/dL (Reference: 0.7–1.3)
- BUN: 16 mg/dL (Reference: 7–20)

Interpretation: Kidney function normal.

----- Overall Comments -----

- Elevated glucose and HbA1c indicate diabetes risk.
- Raised cholesterol and triglycerides indicate heart disease risk.
- Elevated BP indicates hypertension risk.

Lifestyle & Diet Suggestions:

- Reduce sugar and sweetened beverages.
- Limit sodium and processed foods.
- Avoid deep-fried and high saturated-fat foods.
- Prefer grilled/boiled foods, whole grains, vegetables, lean protein.
